

SHEET NOTES:

1. THIS DRAWING PRESENTS THE CONCEPTUAL DESIGN FOR THE REMOVAL OF THE EXISTING HEMPHILL DIVERSION DAM, THE INSTALLATION OF A ROUGHENED CHANNEL, AND THE INSTALLATION OF A FARMERS HORIZONTAL SCREEN.
2. TOPOGRAPHY IS BASED ON REGIONAL LIDAR (2018) AND THALWEG SURVEY PROVIDED BY NID.

Hemphill Canal Flows		
Max Flow	17 cfs	NID - BR220 (2011 - 2021)
Min Flow	0.01 cfs	NID - BR220 (2011 - 2021)
5%	9 cfs	NID - BR220 (2011 - 2021)
95%	3cfs	NID - BR220 (2011 - 2021)

Auburn Ravine Flows (1995 - 2021 Auburn Ravine Flows - NID gage BR200)		
Max Flow	203.7 cfs	NID - BR200 (1995 - 2021)
Min Flow	1.9 cfs	NID - BR200 (1995 - 2021)
5%	172.5 cfs	NID - BR200 (1995 - 2021)
95%	13.3 cfs	NID - BR200 (1995 - 2021)
100-yr event	15,643 cfs	FEMA FIS 06061CV001A

Roughened Channel Design Criteria		
Length	< 150 feet	NMFS 4.10.2.2
Slope	< 6%	NMFS 4.10.2.2
Depth of Flow	> 1 foot	NMFS 4.10.2.2

Cone Screen - with Active Cleaning Brushes		
Approach Velocity	< 0.33 fps	
Diameter	78"	
Height	21"
